

LARIUS - Super Fast Airless nozzle various sizes

Reference: SFC

Super Fast Clean Airless nozzle, compatible with all Airless guns, with diameter and spray angle of your choice, without any surcharge.

Refer to the diagram in the description to see the available sizes.

The Airless paint spray nozzles are suitable for use with the Air Mixing Spray Mist Clean Base.

The working pressure on the high pressure spray gun and the abrasive materials will eventually wear out the paint spray nozzle, reducing the spray pattern width and requiring more passes to finish the job with more time and paint wasted.

Immediate replacement of the worn high pressure paint nozzle is recommended as it may exceed the maximum flow rate of your professional airless sprayer.

Compatible with all Airless guns.

Please note that the minimum purchase amount is 200€ + VAT.

If this value cannot be reached, a handling fee of 35€ + VAT will be applied.
