HONDA UMR 435 T BRUSHCUTTER

HONDA UMR 435 T shouldered 35 cc brushcutter with flexible shaft. HONDA UMR 435 T brushcutter is designed to be practical and at same time powerful and reliable, in order to guarantee constant power and torque even in demanding conditions.

HONDA UMR 435 T shouldered brushcutter can tame most difficult terrain with maximum control. In fact, it is so comfortable and easy to use that you can use it on fields and parks endlessly. The precise manoeuvrability of HONDA UMR 435 T brushcutter makes it easy to work with different types of foliage & flexible mast provides extra control that a fixed mast cannot offer. So whether you're facing dense undergrowth, steep grass banks or narrow spaces around obstacles, HONDA UMR 435 T brushcutter will get better of you.

Support springs

Specially designed spring mounts of HONDA UMR 435 T are part of our anti-vibration frame of supported brushcutter. It absorbs any vibrations produced by engine on shoulders. This level of comfort allows you to keep working until you're practically out of gas, & thanks to its outstanding fuel economy, range is significantly increased.

Intelligent cutting head

Semi-automatic head feeds nylon thread, simply by hitting ground. At five inches in diameter, head is 56% more effective than a traditional model. Small cutting apparatus is made of metal, not plastic like those used by other manufacturers. This means that it can be sharpened, an essential feature for professional use.

Two-in-one cutting apparatus

Our unique safety protection, found on all HONDA UMK & HONDA UMR models, makes it easy to replace the nylon head with the heavy-duty three-point blade. Ideal solution for working in dense bush, no additional protection required. The bottom part can be easily removed & repositioned after head has been changed.

Built to last

Thanks to use of same non-contact sealing bearings used by NASA, brushcutter head also boasts longer life & better dustproof properties compared to traditional full contact bearings. This means that our bearings are unstoppable.

Tailor-made

You would never wear clothes that don't fit, why should it be any different when it comes to harness of the shouldered brushcutter? Sturdy five-point harness allows you to comfortably position motor on your back. Various adjustment options allow you to adapt to different body types to ensure a perfect & secure fit, just like a glove.

Practical & easy to handle

Special harness on shouldered brushcutter distributes weight of engine between the waist & shoulders, leaving the arms free & optimising control over flexible mast. It is ideal for manoeuvring cutting head around obstacles for long periods of use.

Perfect stability

Reliable harness of HONDA UMR 435 T also guarantees perfect balance & a low centre of gravity. It can be very useful when

working on steep slopes or uneven terrain.
