

HONDA NYLON HEAD FOR UMC

Reference: SSBC

Nylon head "tap and go" Honda for Versatool UMC 425 E and UMC 435 E

Nylon head "tap and go" for Versatool Honda UMC 425 E and UMC 435 E multifunction tool. The semi-automatic brushcutter head feeds the nylon thread, simply by hitting the ground. With five inches in diameter, the brush head is 56% more effective than a traditional model. The small cutting tool is made of metal, not plastic like competing products. This means that it can be sharpened, an essential feature for professional use. The unique safety protection simplifies the exchange between the nylon head and the heavy-duty three-toothed blade. Ideal solution for working on dense bush, it does not require the purchase of additional protection. The bottom can be easily removed and repositioned after the head has been modified.
