

RemigoOne Carrying Bag

Reference: RemigoOne Carrying Bag

RemigoOne Carrying Bag

Carrying bag for electric outboard RemigoOne is not a regular one – it embodies the concept of sustainability. Bag and backpack in one, for safe storage and carrying. It's robust tarp shell will keep your new outboard safe everywhere.

We designed this carrying bag using residual material gathered from our local industries, following circular design principles. For shells, we use upcycled (unused) PVC tarp banners. Foam scraps from local furniture industry serve for paddings. We're currently working on implementing full circular business model to achieve regular production of the bags and sustainable collaboration with companies and people involved.

There is an outer pocket for storing bracket and chargers, and an inside one for storing small parts like RemigoOne Key and tools for shaft length adjustment. To prevent the outboard from moving around in the bag fasten RemigoOne using two straps. In case you're not sure about the right orientation of the outboard when putting it in the bag, you'll find an additional padding for propeller protection located in one corner inside. **To turn the bag into backpack, first find straps hidden on the bottom outer side of the bag.**

Looking for an electric outboard? [HERE](#) you can find the entire Remigo range or other brands specializing in the field.
