

## Water Heater RA-1500 230V 1500W

Reference: 00706165

Water heater for generator sets RA-1500

Suitable for water heating in diesel engines with closed-circuit cooling.

The heater prevents the temperature of the cooling circuit from falling below a certain value. This value is controlled by an internal thermostat. A second internal thermostat protects the unit from overheating.

Key features of the heater RA-1500

- Direct fixing, no bracket required
- Presence of a coolant drain plug
- Standard power cable 3 meters long
- Special cataphoresis coating that protects it from the glycol.
- Excellent dielectric strength
- Connections facilitated by the presence of a cable
- Temperature maintenance by internal thermostat: a second thermostat protects the apparatus from possible overheating phenomena
- Suitable for direct mounting on the motor.

### Technical Sheet

|                         |              |
|-------------------------|--------------|
| Phase                   | Single phase |
| Frequency (Hz)          | 50           |
| Voltage (V)             | 230          |
| Single-phase power (KW) | 1,5          |
| Power (W)               | 1500         |
| Length (mm)             | 163          |
| Width (mm)              | 92           |
| Height (mm)             | 239,5        |
| Product type            | Scaldiglia   |
| Weight (Kg)             | 1.1          |
