

FAST CHARGER 500W

Reference: 27700

A 500W fast charger is a fast charger that can provide up to 500W of power. This makes it ideal for charging high-power devices such as laptops, high-end smartphones and power banks.

500W fast chargers use a fast charging technology called Power Delivery (PD). PD is a charging standard that allows devices to charge faster and more efficiently than traditional chargers.

To use a 500W fast charger, the device you want to charge must be compatible with the PD standard. If the device is not PD compatible, it will not be able to benefit from fast charging.

500W fast chargers are available in a variety of formats, including wall chargers, car chargers and portable chargers. Wall chargers are the most common and plug into a standard power outlet. Car chargers plug into a car's cigarette lighter socket and portable chargers can be charged by plugging them into a computer or other power source.

500W fast chargers are an ideal solution for those who need to charge their devices quickly. They are especially useful for people on the move or for those who need to charge several devices at the same time.

Here are some examples of devices that can be charged with a 500W fast charger:

- Laptop
- High-end smartphones
- Power bank
- Tablets
- Nintendo Switch
- PlayStation 5
- Xbox Series X/S
