Osmosea WASHING TANK

The desalinator flushing tank you have described is an essential component for the maintenance and winterisation of desalinisation plants. It is specifically designed to facilitate desalinator cleaning and storage operations, avoiding the need to disconnect pipes.

Main features:

Three-way valve: This key element allows selection between two operating modes

Chemical agent recycling: Allowing the introduction of specific chemicals for cleaning and sanitising the desalinator's membranes and components.

Stainless steel construction: Ensures long life, corrosion resistance and ease of cleaning.

Wall or base mounting: Offers flexibility in installation, adapting to different configurations
