Gasoline Transport Tank: Innovation and Safety in Fuel Transport

The Gasoline Transport Tank represents the latest evolution in portable fuel tanks, offering an advanced and reliable solution for transporting diesel or gasoline. With a capacity of 330 liters and a robust design, this tank is ideal for professionals and individuals who need a mobile and safe solution for refueling vehicles, machinery, and equipment.

Approvals and Resistance:

The Gasoline Transport Tank has passed rigorous stress tests and obtained the main approvals for fuel transport:

ADR (road)

RID (rail)

ADN (lakes and rivers)

IMDG (sea)

UN/DOT approval

Its high-resistance polyethylene structure guarantees:

High resistance to impacts and breakages

Pressure resistance

Low temperature resistance

UV resistance

Internal baffles ensure stability and balance during transport.

Advanced digital design, tested to withstand pressure and repeated drops.

Main Features:

Lockable lid for added security.

Aluminum filler cap.

Safety valve.

Level indicator for precise fuel control.

Transfer unit for easy and quick refueling.

Slots for lifting with forklift forks (full).

Handles for lifting when empty.

Housing for positioning fastening straps to the support base.

Possibility to install various filtration systems.

Specific version available for diesel.

Technical Specifications:

Dry weight (Kg): 53

Tank capacity (L): 330

Product dimensions (mm): 1295x885x665

Thickness: 11 mm

Empty weight with 12V Pump Unit: 65Kg

Fuel: Gasoline
