

FISCHER PANDA Parallel Switchgear 30x - 400V / 12 V DC - 25.5kW

Reference: 0030458

FISCHER PANDA Parallel Switchboard 30x - 400V / 12 V DC - 25.5kW

The Fischer Panda parallel switchboard is designed to connect two Fischer Panda generators in parallel.

The unit can be used to synchronize both generators to switch the load from one generator to the other, or to operate both generators in parallel during peak load periods.

The parallel power units can be combined with the automatic AC transfer unit in a single housing upon request.

The parallel transfer unit does not feature load-sharing capability for safety reasons. Both generators are coupled and operate together as a single unit.

To enhance operational safety, both generators are shut down in the event of a system failure.
