

Compact Power Manager for three-phase systems from 30 to 100 kW meter

Reference: PM03T100

Power Meter

Power Meter is a clever sensor that effectively monitors energy flows at the meter. It is essential for intelligently adjusting the charging of one or more chargers based on other network loads and optimizing the use of available photovoltaic production.

Technical Sheet

Maximum power three phase (KW)	100
Current max (A)	145
