TELECO TELAIR TeleplusX2-51VU Terrestrial Digital and Analog Antenna

The TELECO TELAIR TeleplusX2-51VU represents the natural evolution of the TELECO TELAIR antenna, a product that has won the affection and trust of users thanks to its proven experience and outstanding results achieved over the years. This TELECO TELAIR TeleplusX2-51VU has been designed with great attention to improving performance, particularly in signal sensitivity for weaker signals, ensuring optimal reception in any situation.

The strong point of the TeleplusX2-51VU model is the introduction of an innovative polarity orientation mechanism that allows reception of TV signals in both horizontal and vertical polarity, greatly increasing versatility and reception efficiency. This feature is particularly useful in countries like Italy and England, where digital transmissions in vertical polarity are becoming increasingly common. With the ability to easily orient the antenna, even from inside the vehicle, the TELECO TELAIR ensures the best possible performance in any condition.

Another strong point of the TeleplusX2-51VU TELECO TELAIR is its high gain, which, combined with a low-noise adjustable amplifier, reaches 38 dB on UHF channels (21-48) and 22 dB on VHF BIII channels (E5-E12). This makes the antenna particularly suitable for receiving both digital and analog signals across a wide range of frequencies without compromising signal quality.

Main Features TELECO TELAIR TeleplusX2-51VU:

Terrestrial digital and analog antenna ideal for horizontal and vertical TV signal reception.

Gain: up to 38 dB on UHF channels (21-48) and 22 dB on VHF BIII channels (E5-E12).

Power supply: compatible with 12 Vdc and 24 Vdc.

Polarity orientation mechanism to optimize signal reception.

Wedge spacer for perfect adaptation to the vehicle roof.

Built-in LTE filter to eliminate interference from 4G/5G devices.

Secure and easy-to-use mast locking system.

Low-noise adjustable amplifier included.

The TELECO TeleplusX2-51VU is the perfect choice for anyone looking for a versatile and powerful antenna capable of ensuring

excellent reception of both digital and analog TV signals in any situation. Thanks to the quality and advanced features of the TELECO TELAIR, this TeleplusX2-51VU offers superior performance for all types of vehicles.

The TeleplusX2-51VU is also equipped with an LTE filter, which eliminates interference caused by new 4G and 5G transmissions (especially in countries that have already integrated the LTE 700-800 MHz band). This makes the antenna perfect even in environments with heavy signal traffic, such as urban areas with high mobile device density.

Additionally, the antenna's design is tailored to fit perfectly on all types of vehicles, thanks to the wedge spacer that allows easy and secure installation even on complex roof shapes. The robust and reliable mast locking system ensures that the antenna remains stable even during driving.

The TELECO TELAIR TeleplusX2-51VU is powered by 12Vdc-24Vdc, offering flexibility for use on both 12V and 24V vehicle systems, and comes with a low-noise amplifier for consistently excellent reception quality.
