Product description:

The Dometic FreshJet 1700

The Dometic Freshjet 1700 is a highly compact air conditioner designed by Dometic for use in motorhomes and caravans up to 6 meters long. It is one of the smallest air conditioners available for such vehicles and is ideal for those who want to maximize their available space. Despite its small size, the Dometic FreshJet 1700 is powerful enough to provide efficient air distribution in two directions, allowing for both cooling and heating, ensuring a comfortable on-board experience throughout the year.

One of the most significant benefits of the Dometic FreshJet 1700 is its ultra-compact design. The unit is so small that it leaves ample room for other essential equipment such as solar panels or a satellite dish. This feature is especially important for those who like to spend extended periods on the road, as it allows them to generate their own power and stay connected to the outside world.

Another significant advantage of the Dometic FreshJet 1700 is its low starting current. This feature ensures that the unit can operate smoothly even on campsites with low electrical protection. It also means that the air conditioner won't place a significant strain on your motorhome or caravan's electrical system, ensuring that you can continue to use other appliances without interruption.

The Dometic FreshJet 1700 is highly efficient at distributing air in two directions, ensuring that your motorhome or caravan stays cool in the summer and warm in the winter. Its compact size means that it can be used in combination with another air conditioner for larger vehicles, providing even greater cooling capacity. This feature is especially useful for those who travel to hot climates or who have larger vehicles that require more cooling power.

It is essential to note that the Dometic FreshJet 1700 is no longer available and has been replaced by the FreshJet 2200, which is also designed by Dometic. The FreshJet 2200 is an even more powerful and efficient air conditioner than its predecessor and is ideal for those who need a

reliable and effective way to cool and heat their motorhome or caravan. With its superior performance and features, the FreshJet 2200 is sure to meet all your cooling and heating needs on the road.

In conclusion, the Dometic FreshJet 1700 is an excellent option for those looking for a highly efficient and compact air conditioner for their motorhome or caravan. Its ultra-compact design, low starting current, and efficient air distribution make it an ideal choice for those who want to maximize their available space while staying comfortable on the road. While the product is no longer available, the FreshJet 2200 is an excellent replacement that is sure to meet all your cooling and heating needs.
