

VTE PAGURO REMOTE CONTROL

Product description:

The remote control is a management, supervision and protection tool for the PAGURO. It has a graphic LCD display with white backlighting, for the display of engine rpm, current supplied, frequency and hour meter; it is equipped with a light for a quick view of the alarm status of the generator.

At the time of purchase it will be necessary to communicate the model and serial number of the generator set to be associated.

The images are purely indicative.
