Product description:

Thermal aerosolizer SIFI XP-SANO

Thermal aerosolizer with electronic digital control. Ideal for the sterilization of small and medium environments such as cars, campers, caravans, planes, boats, trucks and mobile homes. XP-Sano destroys germs and bacteria by introducing a dry aerosol of substances that neither humidify nor leave patina in the surrounding air. The disinfectant or pest control particles emitted by the sprayer, with a diameter of less than one micron, form a uniform dispersion of the substance in the environment. The mixtures, remaining in suspension for about 2 hours, result in a more effective action than traditional methods. With an extremely small amount of product it is possible to disinfect or disinfect different environments in a very short time. The treatment remains active for about 60 days.
