

# LINZ DR30 SINGLE-PHASE DIGITAL VOLTAGE REGULATOR

## Product description:

### LINZ DR30 SINGLE-PHASE DIGITAL VOLTAGE REGULATOR

The Linz DR30 digital regulator, the heart of the PRO-DG series alternators, will allow you to monitor all alternator parameters, give the machine a high starting capacity, particularly suitable for the use of heavy loads.

The quality, efficiency and proverbial reliability of the PRO series alternators fully enter the digital era by marrying the extremely innovative features of the Linz-DR30 device which, is not only a digital regulator, but a true technological heart capable of communicating all its data in real time on a simple app on your smartphone.

The Linz DR30 always guarantees performance even with single-phase, highly distorting and unbalanced loads, gives absolute voltage accuracy with a deviation of less than  $\pm 0.5\%$

Digital innovation also means equipping PRO-DG machines with true intelligence that can communicate with the outside world through various technologies:

- o A data history memory that can be read via the APP by a smartphone equipped with an NFC reader, even if the unit is turned off or damaged
- o Connection via Bluetooth - through the APP it will be possible to perform some diagnostic tests , read and change some parameters and protection thresholds.
- o Telecontrol via Bluetooth - In this way the smartphone acts as a bridge with a cloud server and gives the operator in Linz Electric the ability to remotely read and change parameters in real time.
- o 24-hour monitoring with remote telecontrol - you can monitor and view data from the board continuously, and you will also be able to introduce any alerts in case of an error.

Looking for a product with different technical features? HERE you can find the area dedicated to LINZ voltage regulators or other specialized brands.

Images and technical data are not binding and may be subject to revision by the manufacturer.

**Product features:**

Product type: Voltage Regulator
