

SCHENKER PICK & DRINK

Product price:

447,00 € tax excluded

Product description:

SCHENKER PICK & DRINK

Pick & Drink is a complete kit that allows you to make the water in the tank perfectly drinkable and taste good. Excellent fresh water

quality always available from the dispenser, which eliminates the need to stow bulky and polluting bottles of water, for the benefit of convenience and the environment.

The Pick & Drink system consists of a pair of pre-assembled filters, which are normally mounted in the sink cabinet, and a dispenser. Thanks to the complete fittings supplied, the system connects easily to the pressurized fresh water network on board.

The first filter of the Pick & Drink is a "carbon block" that eliminates impurities up to 5 micro, chlorine and other unwanted flavors and odors. The second filter retains impurities down to 0.15 microns, thus carrying out a final ultrafiltration. Reduces any bacterial load by 99.99%.

The cartridges, once exhausted, are easily replaced with new ones thanks to a practical bayonet connection system with safety catch.
