Product description:

TELECO TELAIR ACTIVSAT 65 PORTABLE AUTOMATIC SATELLITE ANTENNA SINGLE LNB

TELECO TELAIR ACTIVSAT65 is a portable automatic satellite device designed to offer a simple and quick solution for your caravan or motorhome. You can park your vehicle under the shade of trees and easily set up the TELAIR TELECO ACTIVSAT65 on the adjacent grass. This innovative satellite antenna system allows for quick installation without the need for tools, with automatic signal search via Bluetooth or button, ensuring efficiency and practicality in every situation.

Simply open the tripod, mount the motor unit, insert the antenna dish, and connect the 15-meter cable to the external ACTIVSAT socket of the vehicle. With the TELAIR TELECO ACTIVSAT65, installation is simple and fast, making the user experience very intuitive. No additional tools are required, so you can start enjoying your journey in no time.

The antenna of the TELAIR TELECO ACTIVSAT65 is designed to automatically point to the satellite in a few seconds, with the option to choose between two search modes: the Quick Search, which limits the search to 120° and reduces battery consumption by 70%, and the Total Search at 360°, which ensures full coverage. In addition, the TELAIR TELECO ACTIVSAT65 stores the positions of previously found satellites to further reduce search time during future connections.

Security and advanced technology are a priority for the TELAIR TELECO ACTIVSAT65. This device is equipped with a double anti-theft alarm with a very loud sound, and the possibility to activate an optional external light. Each external satellite antenna TELAIR TELECO ACTIVSAT65 is linked to its internal control module via the serial number, which is registered in the Teleco Data Base. This means that, in the event of theft of the external antenna, anyone trying to replace it will not be able to obtain a new control unit without providing the serial number and their name, ensuring total protection against theft.

TELECO TELAIR Double Anti-Theft Alarm:

- If someone cuts the cable, a very loud sound is emitted, and an external light can be automatically activated (optional).
- The external satellite unit is strictly linked to its internal control unit via the serial number. All serial numbers are registered in a Teleco Data Base, and if someone steals the external unit, they will not be able to obtain a control unit replacement without providing the serial number of the external unit and their own name!
