

TELECO MOTOSAT DIGIMATIC85

Product price:

725,00 € tax excluded

Product description:

TELECO MOTOSAT DIGIMATIC85 SATELLITE ANTENNA 85cm

TELECO MOTOSAT DIGIMATIC85 is a semi-automatic satellite antenna system equipped with a 12-volt electric motor which, by means of 2 buttons (up/down), considerably facilitates the operation of raising and lowering of the antenna and also makes the pointing of the satellite faster.

TELECO MOTOSAT DIGIMATIC85 is a satellite antenna expressly designed and realized by TELECO to allow the user the semi-automatic pointing to the desired satellite with a few simple and fast maneuvers.

Currently, the main difficulty in pointing to a satellite that transmits TV signals in digital mode is linked to the fact that digital signals are displayed on the TV screen with a certain delay in addition to the latency of LCD TVs and therefore the user is forced to make the pointing with very slow movements in order not to risk passing in front of the satellite without noticing it.

TELECO MOTOSAT DIGIMATIC85 with its 12 V electric motor combined with the electronic elevation meter DSF90E/HD is the solution to the problem. The small but powerful motor of the TELECO MOTOSAT allows much more precise inclination adjustments than the manual ones, while the electronic elevation meter indicates both the elevation and the signal strength. This allows you to quickly set this dish system to the desired satellite without the disadvantages of signal delay.

The satellite antenna has the transmission capabilities managed by the geostationary satellite of reference placed at 13 degrees East which ensures a wide coverage originating in central Europe.

TELECO MOTOSAT DIGIMATIC85 has a directly proportional correlation between its diameter and the signal strength at the edges of the "footprint".

Tendentially it is not recommended to install an antenna of excessively large diameter on a

motorhome, which is why the standard is around 80 cm in diameter.

The coverage thanks to the satellite antenna is very wide starting from the center of Europe. The signal degrades away from the center of Europe. As you can see in the map with TELECO MOTOSAT DIGIMATIC85 you can receive the signal of HotBird (which transmits SKY and TIVUSAT) practically throughout Europe, the north of Morocco, Algeria, Tunisia giving you satellite coverage in any place you decide to stay.

TECHNICAL FEATURES TELECO MOTOSAT DIGIMATIC85

Type of orientation: Semi-Automatic

Type of attachment: Wall bracket

Antenna diameter: 850 mm

Bracket size: 33 cm, 52 cm

Pointing kit: DSF90E/HD

Length: 850 mm

Width: 400 mm

Height: 850 mm

Weight: 10.2 kg

Looking for a product with different features? Here you can find the whole range of TELECO and other specialized brands.

Images and technical data are not binding and subject to change by the manufacturer

Product features:

Diameter (Ø): 85 cm

Lenght closed (mm): 1040

Width closed (mm): 850

Height closed (mm): 170

Length (mm): 850

Width (mm): 1042

Height (mm): 850

Type of coupling head: Wall bracket

Product type: Satellite Antenna

Antenna orientation: Semi-Automatic

Satellites Number: 8

Weight (Kg): 10.2
